EMPLOYMENT IN OTTAWA-CARLETON
1976 - 1986

THE REGIONAL MUNICIPALITY OF OTTAWA-CARLETON
Planning Department

December, 1987

Employment in Ottawa-Carleton, 1976 to 1986

Outline of Report

This report summarizes data on employment in the region in 1976, 1981 and 1986. A survey is undertaken by the Planning Department of all establishments in the region to collect these data at five year intervals.

Part 1 of the report highlights some of the significant trends and circumstances with respect to employment in the region.

Part 2 supplies additional detail on the survey methodology, data sources and data comparability.

Part 3 is a presentation of the most frequently requested data. This section is prefaced with a discussion of the information in the tables where appropriate.

Appendix A contains maps delineating geographic areas referred to in the text.

Part 1 Highlights

Fewer persons are being supported by each job.

In 1986 there were 340,820 full-time and part-time jobs in the Regional Municipality of Ottawa-Carleton compared with 290,547 in 1981 and 270,900 in 1976.

Figure 1 indicates that 100 jobs supported 192 persons in 1976, but the same number of jobs supported only 178 people in 1986. Participation in the labour force has been increasing throughout the period.

FIGURE 1

Persons Per Job

	POPULATION	EMPLOYMENT	PERSONS PER JOB
1976	520,450	270,900	1.92
1981	546,850	290,547	1.88
1986	606,640	340,820	1.78

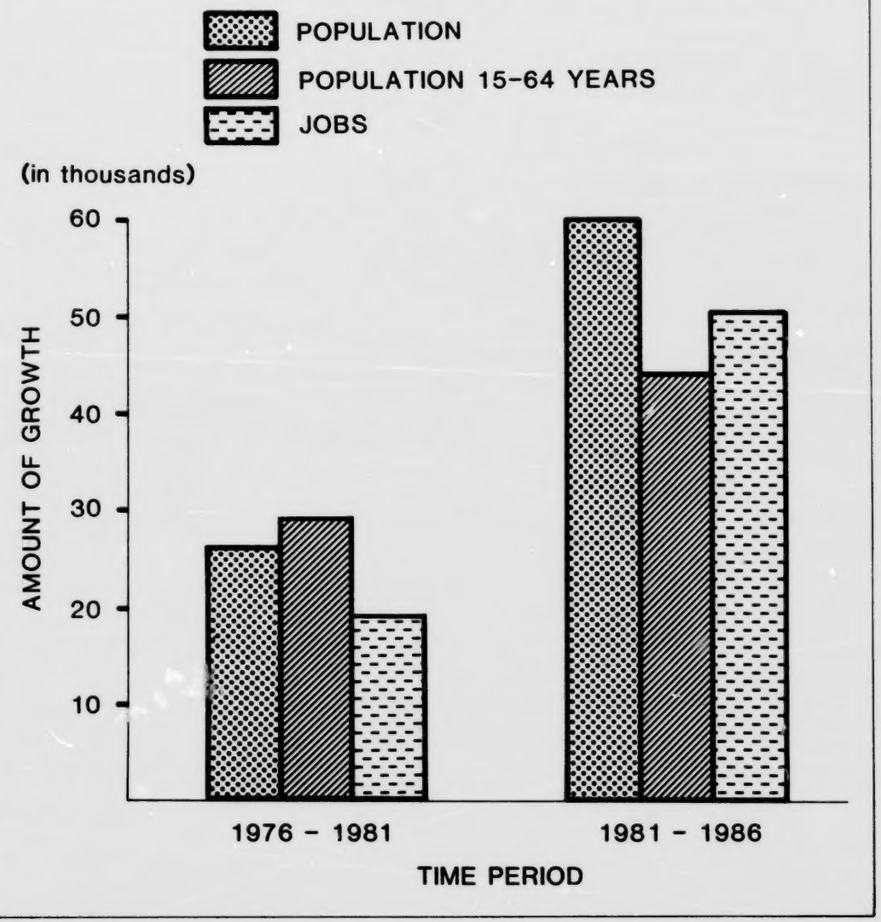
Growth in the period 1981 to 1986 was approximately double the rate of the previous five years.

Figure 2 shows that twice as many jobs were created in the period 1981 to 1986 as compared to the period from 1976 to 1981. Population growth also doubled. To some extent the slower rate of employment growth in the earlier period was due to the relocation of some federal government employment to the Quebec side of the CMA.

The most recent figures available suggest that approximately 84% of jobs in the RMOC are filled by residents of the Region, 10% by individuals living in the Quebec portion of the CMA and 6% by people living outside the Ottawa-Hull CMA. Also, 94% of the region's residents work within the region.

FIGURE 2

POPULATION AND EMPLOYMENT GROWTH



The service sector is now a larger employer than is the federal government.

There were 340,820 jobs in Ottawa-Carleton in 1986. The major share of employment was in community, business and personal services. In addition three out of every five new jobs were in this sector.

The federal government sector, on the other hand, employed fewer people in 1986 than it did in 1976. If all crown corporations, federal agencies, federal administration and defence are included, this group represented 27% of total employment in 1986 compared with 36% in 1976.

Over 14% of all jobs in the region are in trade. As a proportion of the total, this has remained constant over the ten year period.

FIGURE 3

Employment by Sector

SECTOR	1986 EMPLOYMENT	% TOTAL EMPLOYMENT	CHANGE IN EMPLOYMENT 1976-1986
Primary	1,579	0.5	687

* T.C.U. - Transportation, Communications and Utilities
**F.I.R.E. - Finance, Insurance and Real Estate

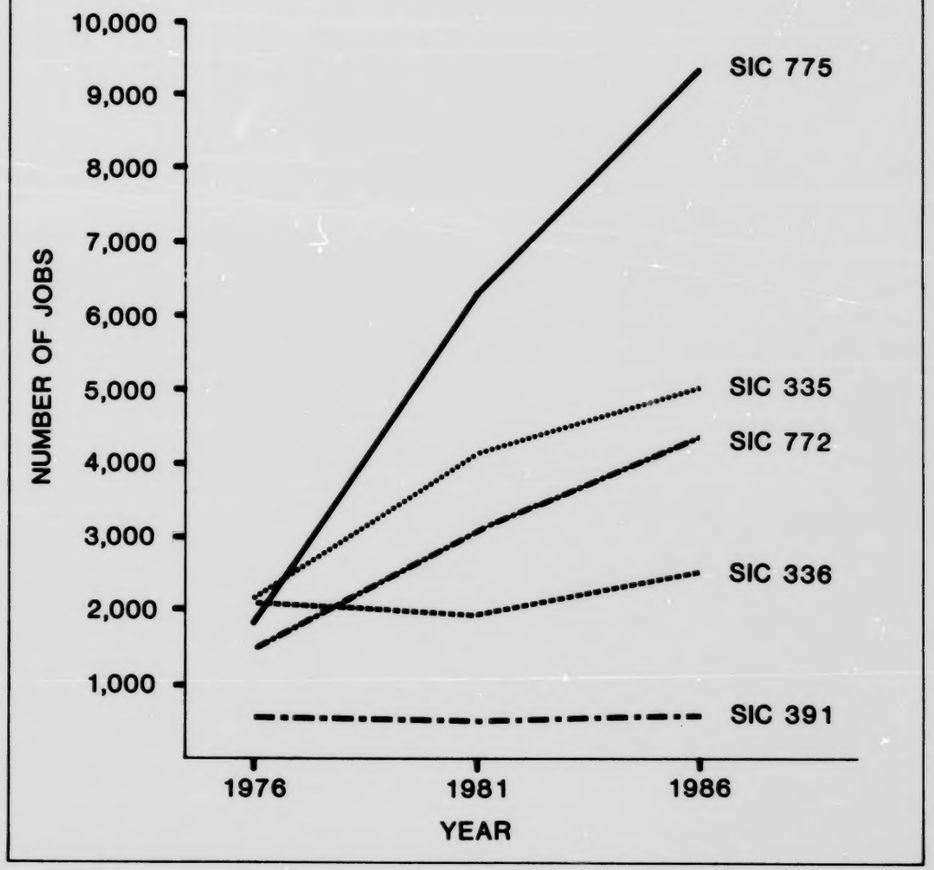
Advanced technology industries captured 20% of the employment growth between 1976 and 1986.

Between 1976 and 1986 there were approximately 70,000 additional jobs in the region and almost 14,000 of these were in advanced technology. In this context, the term is used to describe five categories of employment that have a high proportion of their activity in research, development and engineering (see Table 28).

1. SIC 335: Manufacturing of communication and other electronic equipment (e.g. Northern Telecom and Canadian Marconi);
2. SIC 336: Manufacturing of office, store and business machines (e.g. Digital Equipment, Computing Devices);
3. SIC 391: Manufacturing of scientific and professional equipment industries (e.g. SPAR Aerospace);
4. SIC 772: Computer and related services (e.g. SHL Systemhouse, AES Data);
5. SIC 775: Scientific and technical services (e.g. Bell Northern Research, Dipix Systems).

FIGURE 4

EMPLOYMENT IN ADVANCED TECHNOLOGY



The 26 largest non-federal government employers account for 16% of the region's employment.

Federal government administration and defence accounts for approximately 24% of all employment in the region.

The next 10 largest employers account for an additional 10% of all employment. The next 16 account for an additional 6%.

The largest employers tend to be local governments and major institutions.

The greatest amount of employment growth between 1976 and 1986 was in industrial areas inside the greenbelt boundary.

The central area accommodates slightly more than two of every ten jobs in the region and the rest of the area inside the greenbelt accounts for another seven. The remaining amount, less than one in ten jobs, is in the urban communities and scattered through the rural area.

The following areas are increasing their share of employment opportunities: the urban communities, the rural area and, most significantly, large industrial areas inside the greenbelt boundary (extensive employment areas). It should also be noted that a large amount of the growth is scattered throughout the residential areas.

FIGURE 6

Distribution of Employment by Area

	EMPLOYMENT 1976	EMPLOYMENT 1986	GROWTH 1976-1986	% TOTAL GROWTH
Central Area	65,770	74,850	9,080	13.0
Rest Inside Greenbelt	191,870	237,530	45,660	65.3
- institutional	18,260	23,940	5,680	8.1
- primary centres	11,010	13,490	2,480	3.5
- secondary centres	25,320	33,630	8,310	11.9
- extensive employment	30,770	48,120	17,350	24.8
- specialized areas and other nodes	19,240	19,480	240	0.3
- scattered	87,270	98,870	11,600	17.0
Urban Communities	4,390	13,600	9,210	13.2
Rural	8,880	14,840	5,960	8.5
TOTAL	270,910	340,820	69,910	100.0

Employment in the Central Area is growing slowly.

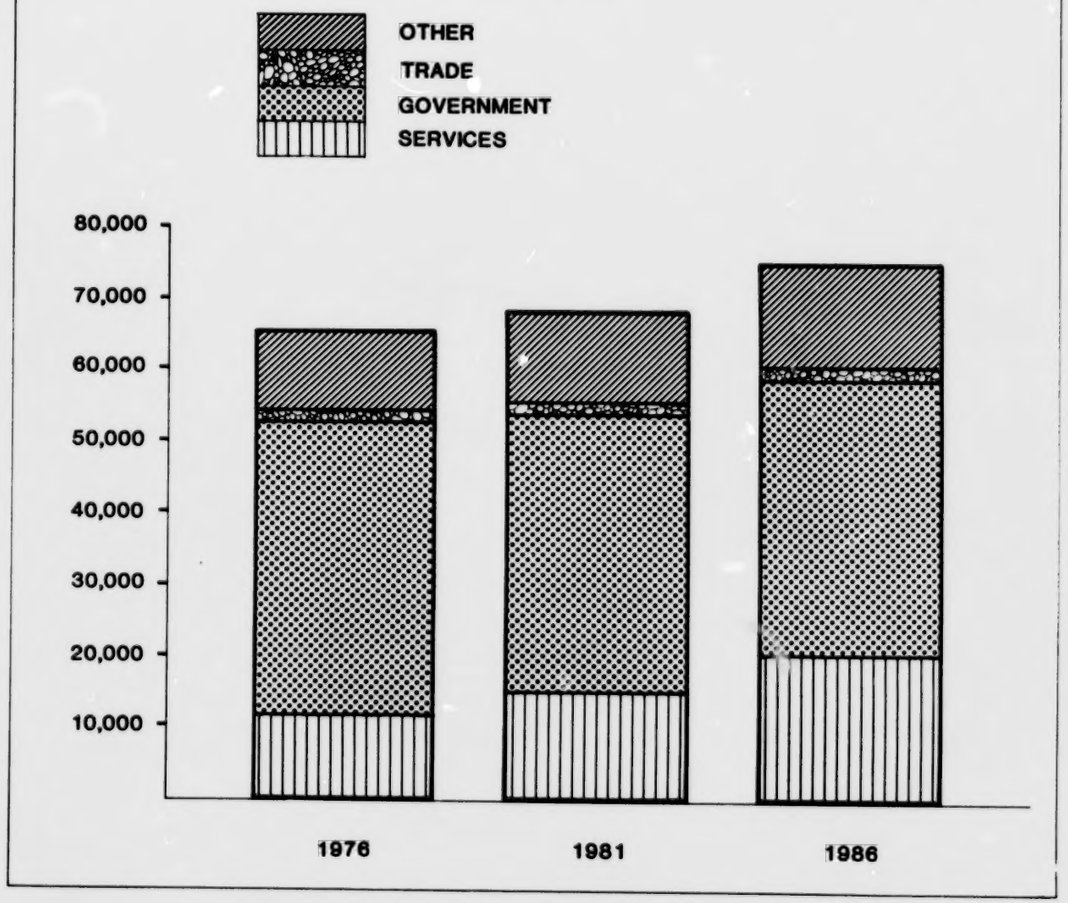
The central area continues to be a focal point of employment activity. However, employment has grown slightly more slowly in the central area than it has in the region as a whole. In 1976, the central area accommodated 24% of the region's employment and in 1986 this had declined to 22%.

This is the trend that the regional official plan assumes. Slow but steady growth in the central area can be accommodated while still maintaining easy accessibility by both road and transit.

Between 1976 and 1981 there were fewer than 2,500 new jobs in the central area but that was a period when there was an absolute loss in federal government employment. In the second five year period there was a gain of 6,700 employment opportunities. Two of every three new jobs in the last five years in the central area were in business services or in accommodation and food services (see Table 19).

FIGURE 7

EMPLOYMENT IN THE CENTRAL AREA



Employment in the Urban Communities represents a small proportion of the total.

In 1986 approximately one in five persons lived in Orleans, Kanata or Barrhaven. At the same time only one in twenty jobs were located here.

In urban Kanata employment increased by 4,000 in the first five year period, almost wholly due to growth in manufacturing. In the latter five year period there was a net growth of slightly over 1,000 jobs and an actual decline in manufacturing.

In Orleans, most of the employment is in the service sector. Growth has picked up in the last five year period but total employment is still significantly lower than in Kanata.

Employment in the Barrhaven area is insignificant at this time. (For more details see Tables 21 to 25).

FIGURE 8

EMPLOYMENT IN 1986

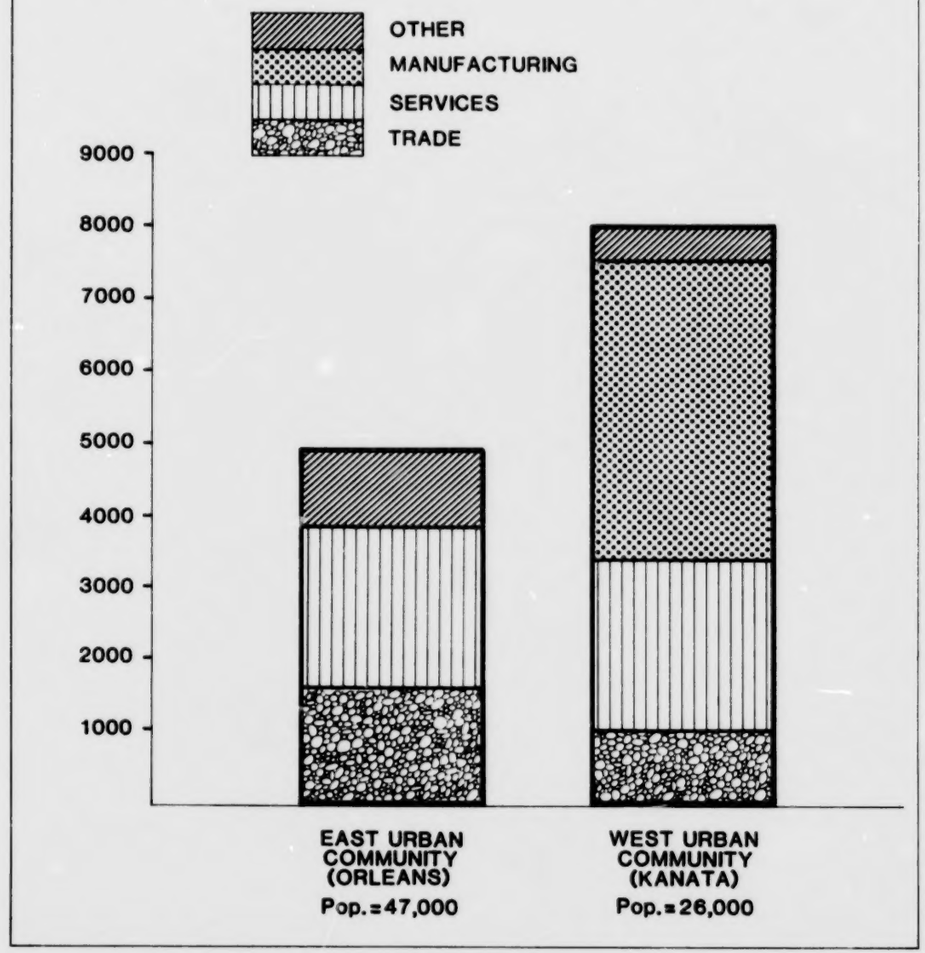


FIGURE 9

The City of Ottawa has about half the population and three quarters of the jobs in Ottawa-Carleton.

The City of Ottawa accommodates almost 75% of all jobs in Ottawa-Carleton. However, in 1976 this figure was slightly over 80%. As its share of employment is reduced, the Cities of Nepean and Gloucester are making large gains.

Nonetheless, there continues to be a much higher concentration of employment in the City of Ottawa than there is population. Also, its share of population is declining somewhat more rapidly than is its share of employment.

Employment by Sector

MUNICIPALITY	1986 EMPLOYMENT	% TOTAL EMP. 1986	1986 POP.	% TOTAL POP. 1986
Cumberland	2,489	0.7	26,999	4.5
Osgoode	1,823	0.5	11,197	1.8
Gloucester	25,108	7.4	89,810	14.8
Vanier	6,211	1.8	18,426	3.0
Rockcliffe Park	200	≤0.1	2,033	0.3
Nepean	37,118	10.9	95,490	15.7
Ottawa	253,806	74.5	300,763	49.6
Rideau	1,725	0.5	10,271	1.7
Goulbourn	2,122	0.6	12,303	2.0
Kanata	8,258	2.4	27,519	4.5
West Carleton	1,957	0.6	11,828	1.9
TOTAL	340,817	100.	606,639	100.

In 1986, approximately one in three jobs was located on the proposed transitway route.

Table 30 summarizes employment data for each committed or existing transitway station. It is assumed that all of the central area is accessible by the transitway. This means that in 1986, there were 75,000 jobs in the central area and 34,000 jobs outside of the central area that were located within a short distance of the transitway stations.

Some of these stations did not exist at the time of the employment survey, however these data represent the base case for future analyses of employment growth on the transitway.

FIGURE 10

Employment at Transitway Stations (1986)

Sector	Employment at Stations	% of Employment in Region
Primary, Manufacturing, Construction	3,881	9.7
Transportation, Communications Utilities	2,272	11.2
Trade	12,811	26.0

Government	48,651	51.7
TOTAL	108,742	31.9

* Includes: Accommodation and Food, Amusement and Recreation, Personal and Household and Other Services.

Part 2 Survey Methodology

SURVEY METHODOLOGY

1. Background

A region-wide employment survey was undertaken in the summer of 1986 to expand the data base established through similar surveys in 1976 and 1981. It is expected that such a study will be completed every five years.

Such data, by establishment and therefore on a street address basis, are not available from any other source. This information is considered essential to the transportation function, in measuring and forecasting trips on particular road links. In the Planning Department these data are used to monitor various policy areas such as employment thresholds in the central area and employment along transitways.

Employment data are not made publicly available on an individual firm basis but, in aggregate form, have been requested by many public agencies and private individuals.

2. Survey Method

The objective of the survey is to create a data base that, for each establishment, records the geographic location (address, census tract, traffic zone etc), the number of full time and part time employees and the primary activity of the employer. This activity is coded using the Standard Industrial Classification (1980).

a) Data Sources

Federal government employment is provided to the Region by the National Capital Commission. All other data are elicited by telephone or by letter through contact with the individual establishments or the head office. The survey is completed over a four month period, unlike the federal census for example, which is done on one day.

Each establishment is asked to provide information on full-time and part-time employment on the day of contact. There is no standard definition of part-time employment, rather, the categorization is left to the discretion of the respondent.

Through a survey such as this, it is not possible to establish 100% coverage of employment. For example, many individuals who are self employed may not be contacted. This category includes most farmers, some entertainers, people working for private households and many other groups such as people who work out of their home on a contract basis in all areas from gardening to computer programming.

The federal government census, on the other hand, contacts each individual person in the region and should therefore approach full coverage. A comparison between the Planning Department's survey and the Census in 1981, indicated that the in-house survey underestimated employment by about 5% or 15,500 employees.

b) Comparability with Past Surveys

This is the third comprehensive employment survey that has been undertaken by the Planning Department. With each exercise, the methodology has been refined and the data control improved. As a consequence, some of the data collected in previous years have been modified. The tables published here provide comparable data for all three surveys.

Since 1976, the Standard Industrial Classification has been amended. In general this has not affected data comparability except where additional categories have been added. All 1981 data have been updated to reflect the new S.I.C. codes.

c) Data aggregation

All data have been aggregated by major group. The following table identifies a few examples of the types of establishments included in each group.

MAJOR GROUP	1980 SIC*	EXAMPLES
1. PRIMARY	011-092	-Farms, veterinary operations, plant nurseries, quarries
2. MANUFACTURING	101-399	-All manufacturing establishments
3. CONSTRUCTION	401-449	-Building, companies, developers, contractors
4. TRANSPORTATION, COMMUNICATIONS AND UTILITIES	451-499	-Airlines, OC Transpo, radio stations, gas distribution
5. TRADE	501-692	-All wholesale and retail establishments
6. FINANCE, INSURANCE, REAL ESTATE	701-761	-Banks, trust companies, real estate
7. COMMUNITY, BUSINESS AND PERSONAL SERVICES		
a)Business Services	771-779	-Computer services, advertising, engineering firms
b)Education Services	851-859	-Schools, libraries, museums

MAJOR GROUP	1980 SIC*	EXAMPLE
c)Health and Social Services	861-869	-Hospitals, doctors offices, laboratories
d)Accommodation and Food Services	911-922	-Hotels, restaurants, caterers
e)Amusement and Recreation Services	961-969	-Cinemas, sports clubs
f)Personal and Household Services	971-979	-Beauty shops, dry cleaners
g)Membership Groups	981-986	-Religious organizations, labour organizations
h)Other Services	991-999	-Parking lots, rental equipment
8. FEDERAL GOVERNMENT AND DEFENCE	811-817	-All federal gov't administration and defence
9. PROVINCIAL ADMINISTRATION	822-827	-All provincial offices including the O.P.P.
10.LOCAL ADMINISTRATION	832-837	-Both local and regional levels of government including police, fire and general administration.
11. OTHER ADMINISTRATION	841	-Embassies

*Standard Industrial Classification

Note: In general, government employment is categorized in the major group of the same name. However, to be consistent with the Census and other data files using the Standard Industrial Classification codes, some government operations are found in the group better describing their operation. This is shown in detail in Table 29.

Part 3 Detailed Tables

DETAILED TABLES

NOTES ON TABLES

1. Table 1: Employment for Major Employment Groups, Region, 1976, 1981, 1986

The employment groups used here, and in subsequent tables, are as described in the previous section. Overall, the total number of jobs in Ottawa-Carleton increased by close to 70,000 between 1976 and 1986. Approximately four in ten new jobs were classified as part time and, as a proportion of the total, part time jobs rose from 13% to 18% in the ten year period.

Primary employment is incomplete as reported in this survey. In particular, it does not include most farm operations. For comparison, in the 1981 census, the total of agriculture, forestry, fishing and mining, amounted to 3,865 jobs where 3,180 were in agriculture and related services . The slight increase in employment that is documented in the survey is due primarily to a general increase in all S.I.C. categories with a slight emphasis on increased employment in nursery type operations.

Manufacturing employment is reported in detail in Table 26 and is discussed in the context of that table. The increase in employment is almost totally explained by gains in "electrical and electronic equipment" and "printing and publishing".

Employment in **construction** varies tremendously year by year and season by season. It is expected that any increases (or decreases) are reflections of its cyclical nature and not necessarily an overall trend.

Transportation, communications and utilities employment recorded large gains in postal and courier service industries. To a certain extent this is due to better coverage of federal government post office employment in 1986 but there have been very significant increases in employment in courier companies.

Trade includes employment in both wholesale and retail operations and has maintained a constant share at 14% of all employment. This has meant an increase of almost 10,000 jobs over the 10 year period. An examination of employment by S.I.C. indicates that there has been a general expansion in almost all groups. There have been notable gains in employment in establishments engaged in wholesale dealing in food products and also larger than average increases in employment in retail food stores.

Employment in **finance, insurance and real estate** averages around 5% of total employment although it has been increasing its share slightly. It encompasses banks (including the Bank of Canada), trust companies, credit unions, investment industries, insurance industries and real estate operators. There have been overall gains across the board.

Community, business and personal services is a general category for a large variety of establishments including some of the region's largest non-federal government employers. There have been employment increases in all categories however, "business services", "health and social services" and "accommodation and food services" have contributed the most to the growth of the service category.

The increased employment in "business services" is dominated by increases in a category including architectural, engineering and other scientific and technical services. This includes certain types of research establishments as well and is often classified as part of "advanced technology" employment (see Table 27).

The gains in health and social services employment are generally throughout the sector with some emphasis on gains in hospital employment, other institutional and health services, such as homes for the aged and in non-institutional social services such as child care and senior citizens centres.

In accommodation and food services the most significant gains, nearly 10,000 employees, were experienced by restaurants, caterers and taverns. In fact, in 1986 this group had almost 17,000 people working in it, close to the total employment in all finance, insurance and real estate establishments. "Food and beverage service industries", as this group is called, represented approximately 2.6% of total employment in 1976 and by 1986 represented 5.0% of the total.

Federal government and defence, provincial administration and **local administration**, are explained in more detail in Table 29. To be consistent with the census and other data sources, some government employment, particularly if it is a crown corporation or agency, is classified outside of these groups. This is a change from previous surveys.

Other administration includes international and extra-territorial agencies including consular, diplomatic and legation activities. Although there is a high concentration of this type of employment in the region, it is not a significant proportion of the total. The numbers have increased at a rate of about 5% per year since 1976.

2. Table 2: Employment Summary for Area Municipalities, 1976, 1981, 1986

The City of Ottawa clearly dominates the rest of the region in terms of its capture of employment. Even though the City's share declined from 80% of the total in 1976 to 74% in 1981 one out of every two new jobs occurred within its boundaries.

The Cities of Gloucester and Nepean captured respectively 17% and 19% of employment growth in the ten year period.

3. Table 3: Employment Distribution by Geographic Area, RMOC, 1976, 1981, 1986

Between 1976 and 1986, approximately 70,000 additional jobs accrued to the region. The central area captured 13% of this net gain, an amount of growth almost identical to the total gain in urban communities.

The rest of the City of Ottawa accounted for 37% of the growth while Nepean and Gloucester, inside the boundaries of the greenbelt, captured 28% of the increase.

While it is true that there has been a slightly higher rate of employment growth outside the greenbelt boundary than there has been inside the boundary, the overall magnitude of employment in situ is such that the general pattern of distribution is fairly constant.

4. Table 4, Table 5, Table 6: Employment Summaries for Municipalities and Major Groups, RMOC (1986, 1981, 1976)

In 1986, the City of Ottawa accounted for 90% of employment in federal administration and defence in the region. However, only 69% of non-federal government employment was located in the City. In construction, manufacturing and trade, its share was significantly below this and in finance and other services, it was above.

More detail for each municipality is found in individual tables from Table 7 to Table 17 inclusive.

5. Table 17: Employment Summary for Geographic Areas and RMOC, 1986

This is a summary of more detailed material found in Tables 18-25 inclusive. The central area has a particularly large share of the region's employment in federal administration and defence and in "finance, insurance and real estate". For almost all other categories of employment however, it is the area inside the greenbelt, but outside the central area, that has the dominant share.

6. Table 27: Employment in Manufacturing, RMOC, 1976, 1981, 1986

These data were reported in detail because manufacturing generally offers the primary opportunities for expansion of basic employment (responding to demand outside the region). This table indicates that the total number of establishments engaged in manufacturing rose from 586 to 797, a gain of 36% over the 10 year period. Employment , however, increased only by 29% in the same time period. Generally it is accepted that most employment growth comes from small new firms as opposed to expansion in existing firms.

The dominant manufacturing activity is undoubtedly the electrical and electronic products industry at 37% of the total, up from 27% in 1976. Printing, publishing and allied industries account for an additional 25% of the total. Over 90% of the net growth in the number of manufacturing establishments occurred in these two categories.

Manufacturing is growing slightly more quickly than is the employment base as a whole. In addition, continued growth in manufacturing is required to off set the decline in federal government administration. Between 1976 and 1986, employment growth in manufacturing represented 7 percent of all employment growth in the region.

7. Table 28: Employment in Advanced Technology, RMOC, 1976, 1981, 1986

Not all of the employment on this table is truly advanced technology but, the SIC groups included here are those with a high proportion of their total activity in research, development and engineering. In total, these categories represent 6.4% of the region's employment. However, between 1976 and 1986, 20% of the net increase in employment occurred here.

Most impressive is the more than tripling of the number of establishments involved in computer services and scientific services.

8. Table 29: Federal, Provincial and Local Government Employment, RMOC, 1976, 1981, 1986

This table is an attempt to standardize government data from different sources. The first column represents the amount of employment reported for each level of government in summary tables such as Table 1. This is consistent with Statistics Canada. The final column represents the total amount of employment in that level of government.

Transportation, communications and utilities includes Air Canada, CBC, OC Transpo, Canada Post, Ontario Hydro, sewage treatment, water supply and local utilities. Community and Personal Services includes homes for the aged, libraries including the national library, galleries and museums, the National Defence Medical Centre and the National Arts Centre. The "Other" category includes the Bank of Canada, Atomic Energy, Eldorado Nuclear, The Royal Mint and Petro Canada.

Ottawa is considered a government town and indeed government employment does dominate in the region. However, the grand total has been declining in absolute numbers and has fallen from 4 in every 10 jobs in 1976 to 3 in every 10 jobs in 1986. This is solely due to a decline in federal government employment since local and regional employment have risen. The latter two are more closely related to the population of the region and the special needs of the population than is the federal government.

In 1976, the grand total of local government employment represented 17.8 employees per 1,000 people and this rose slightly to 20.2 employees per 1,000 people in 1986.
